

NIH Workshop on Trustworthy Data Repositories for Biomedical Sciences

April 9, 2019 TRUST Principles Discussion Word Clouds

Ingrid Dillo facilitated a discussion of the most important aspects of each of the five TRUST principles (Transparency, Responsibility, User Community, Sustainability and Technology) for Biomedical Science Data Repositories with approximately 30 participants on the second day of the workshop. After discussion, the Mentimeter website was used to capture the three most important keywords from participants into a word cloud for each principle. The number of respondents is in lower right corner.

Now that we have had the discussion, what are the three most important keywords for you with respect to Transparency?

Now that we have had the discussion, what are the three most important keywords for you with respect to Responsibility?

Now that we have had the discussion, what are the three most important keywords for you with respect to the User Community?

Now that we have had the discussion, what are the three most important keywords for you with respect to Sustainability?

Now that we have had the discussion, what are the three most important keywords for you with respect to Technology?
